Instrument transformers will transmit the signal to the metering and protective relaying instrumentation, with the purpose of protection of important equipment. Instrument transformers will operate successfully under many atmospheric conditions and transients, and switching overvoltages. ABB provides services throughout the transformer life cycle, from commissioning to recycling, for all brands and kinds of transformers. It allows utilities and industrials to maximize the return on transformer assets. A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force across a second coil wound around the same core.
