The Proto-Austronesian language (PAN) is the reconstructed ancestor of the Austronesian languages, one of the world's major language families. Lower-level reconstructions have also been made, and include Proto-Malayo-Polynesian, Proto-Oceanic, and Proto-Polynesian. As with other regions in the Horn of Africa, nation-based traditions of historiography and epistemologies in this area have usually perceived the space inhabited by Tigre-speaking societies as somewhat on the margins, on the very periphery of the ... Shoshoni, also written as Shoshoni-Gosiute and Shoshone (/ʔoʔʔʔoni/; Shoshoni: Sosoni'taʔiʔkwappe, newe taʔiʔkwappe or neme taʔiʔkwappə) is a Numic language of the Uto-Aztecan family, spoken in the Western United States by the Shoshone people. Results. Eighty heads of 40 gastrocnemius muscles showed 438 gastrocnemius veins. The number of veins per muscle head varied between 2 and 12. There were 221 gastrocnemius trunks distributed as 95 main gastrocnemius trunks, 81 axial and 45 collateral ones.
