This book explores the economic and environmental implications of environmental tax reform (ETR), also known as green fiscal reform, which entails a reduction in taxes on labour and profits, and a corresponding increase in taxes on pollution and the use of natural resources. Environmental tax reform (ETR): a policy for green growth, edited by Paul Ekins and Stephan Speck, Oxford, Oxford University Press, 2011, xxxiv + 371 pp., index, £55.00 (hardback), ISBN 9780199584505 This report examines how green growth and sustainable development policies can be incorporated into structural reform agendas. Indeed, as demonstrated in the report, many of these policies are closely linked and synergistic with the framework policies applied by G20 governments in their efforts to pursue strong and sustainable growth. Many people have serious concerns about the environment and wonder whether solving environmental problems is compatible with continuing economic growth. This book provides an in-depth exploration of a proposed reform to the national tax system, whereby the burden of taxes is shifted from conventional taxes, such as those levied on labour and capital, to taxes on environmentally related activities, that involve resource use, particularly energy, or environmental pollution.
