Evolution is change in the heritable characteristics of biological populations over successive generations. These characteristics are the expressions of genes that are passed on from parent to offspring during reproduction. Objections to evolution have been raised since evolutionary ideas came to prominence in the 19th century. When Charles Darwin published his 1859 book *On the Origin of Species*, his theory of evolution (the idea that species arose through descent with modification from a single common ancestor in a process driven by natural selection) initially ... *Life* (ISSN 2075-1729; CODEN: LBSIB7) is an international peer-reviewed open access journal of scientific studies related to fundamental themes in Life Sciences, especially those concerned with the origins of life and evolution of biosystems, and is published quarterly online by MDPI.
