

# Download Gender Artificial Intelligence

Obviously not everyone is qualified to work in artificial intelligence or data science. Let's go back to the data to see how far off 0.1% is. If you go to LinkedIn and just take a look at people who list "artificial intelligence" in their profiles and are in the US, you'll get 81,921 people. This search misses a lot of people who basically do AI but don't mention it explicitly and it lets in too many people who maybe are attached to AI systems but aren't developers/data scientists. A very different trend in cinematic AI. Let's look at another place of imagination: artificial intelligence in movies, which ends up much more regularly being embodied (e.g., robots). Artificial Intelligence (AI) is a prominent driver of change within the transformations brought about by the Fourth Industrial Revolution (4IR), and can serve as key marker of the trajectory of innovation across industries. 19 In partnership with the LinkedIn Economic Graph Team, the World Economic Forum aims to provide fresh evidence of the emerging contours of gender parity in the new world of work through near-term labour market information. Preventing racial, age, gender, disability and other discrimination by humans and A.I. using the latest advances in Artificial Intelligence The new issue of Science (Vol 357, Issue 6346) is devoted to AI.
