All systems come with your choice of security camera type and all systems offers many optional upgrades such as a power supply box, larger hard drives, and LCD monitors. All systems are capable of continuous and/or motion detection recording. Want help designing a system from a Camera Pro? Call us at 888-849-2288. Wireless security camera systems have become very popular because they tend to offer more location flexibility. An additional benefit of a wireless camera system is that most can be easily integrated into existing home automation systems and smart home setups to coordinate with smart control of lights, smart locks and smart thermostats to deliver extra layers of security. Our smart security camera and alarm system uses human-computer vision to see and understand threats. When a mugger pulls out a knife, when a kidnapper tries to force a child into a car, when a gunman tries to take a life, Athena can see the threat before it becomes a crime. Other security cameras can document crimes after they happen. Only Athena's next-generation camera can stop crime in its tracks. Many of the best security camera systems also help turn your house into a smart home. Security cameras can often integrate with a smart home hub like Amazon Echo or Google Home. This can give you a huge home security advantage—the ability to remotely control lights, door locks, and your security cameras.
