The University of Cambridge (formally The Chancellor, Masters, and Scholars of the University of Cambridge) is a collegiate public research university in Cambridge, England. Cambridge grew slowly as an agricultural village eight miles (13 km) by road from Boston, the colony's capital. By the American Revolution, most residents lived near the Common and Harvard College, with most of the town comprising farms and estates. The National Geographic Society and IBM today announced the Genographic Project to collect, analyze, and study 100,000 DNA samples from indigenous people from around the world to better understand the history of human migration.
