Abstract. The ubiquity of frustrating, unhelpful software interfaces has motivated decades of research into “Human-Computer Interaction.” In this paper, I suggest that the long-standing focus on “interaction” may be misguided. Causes. Joel Spolsky points out that users usually do not pay full attention to the computer system while using it. He suggests to compensate for this to make usable systems, thus allowing a higher percentage of users to complete tasks without errors: Introduction Foreword. It is often remarked that groups are everywhere, whether in our social lives, our work lives, or even our families. In each of these situations, sets of individuals decide to work collectively to achieve particular goals.
